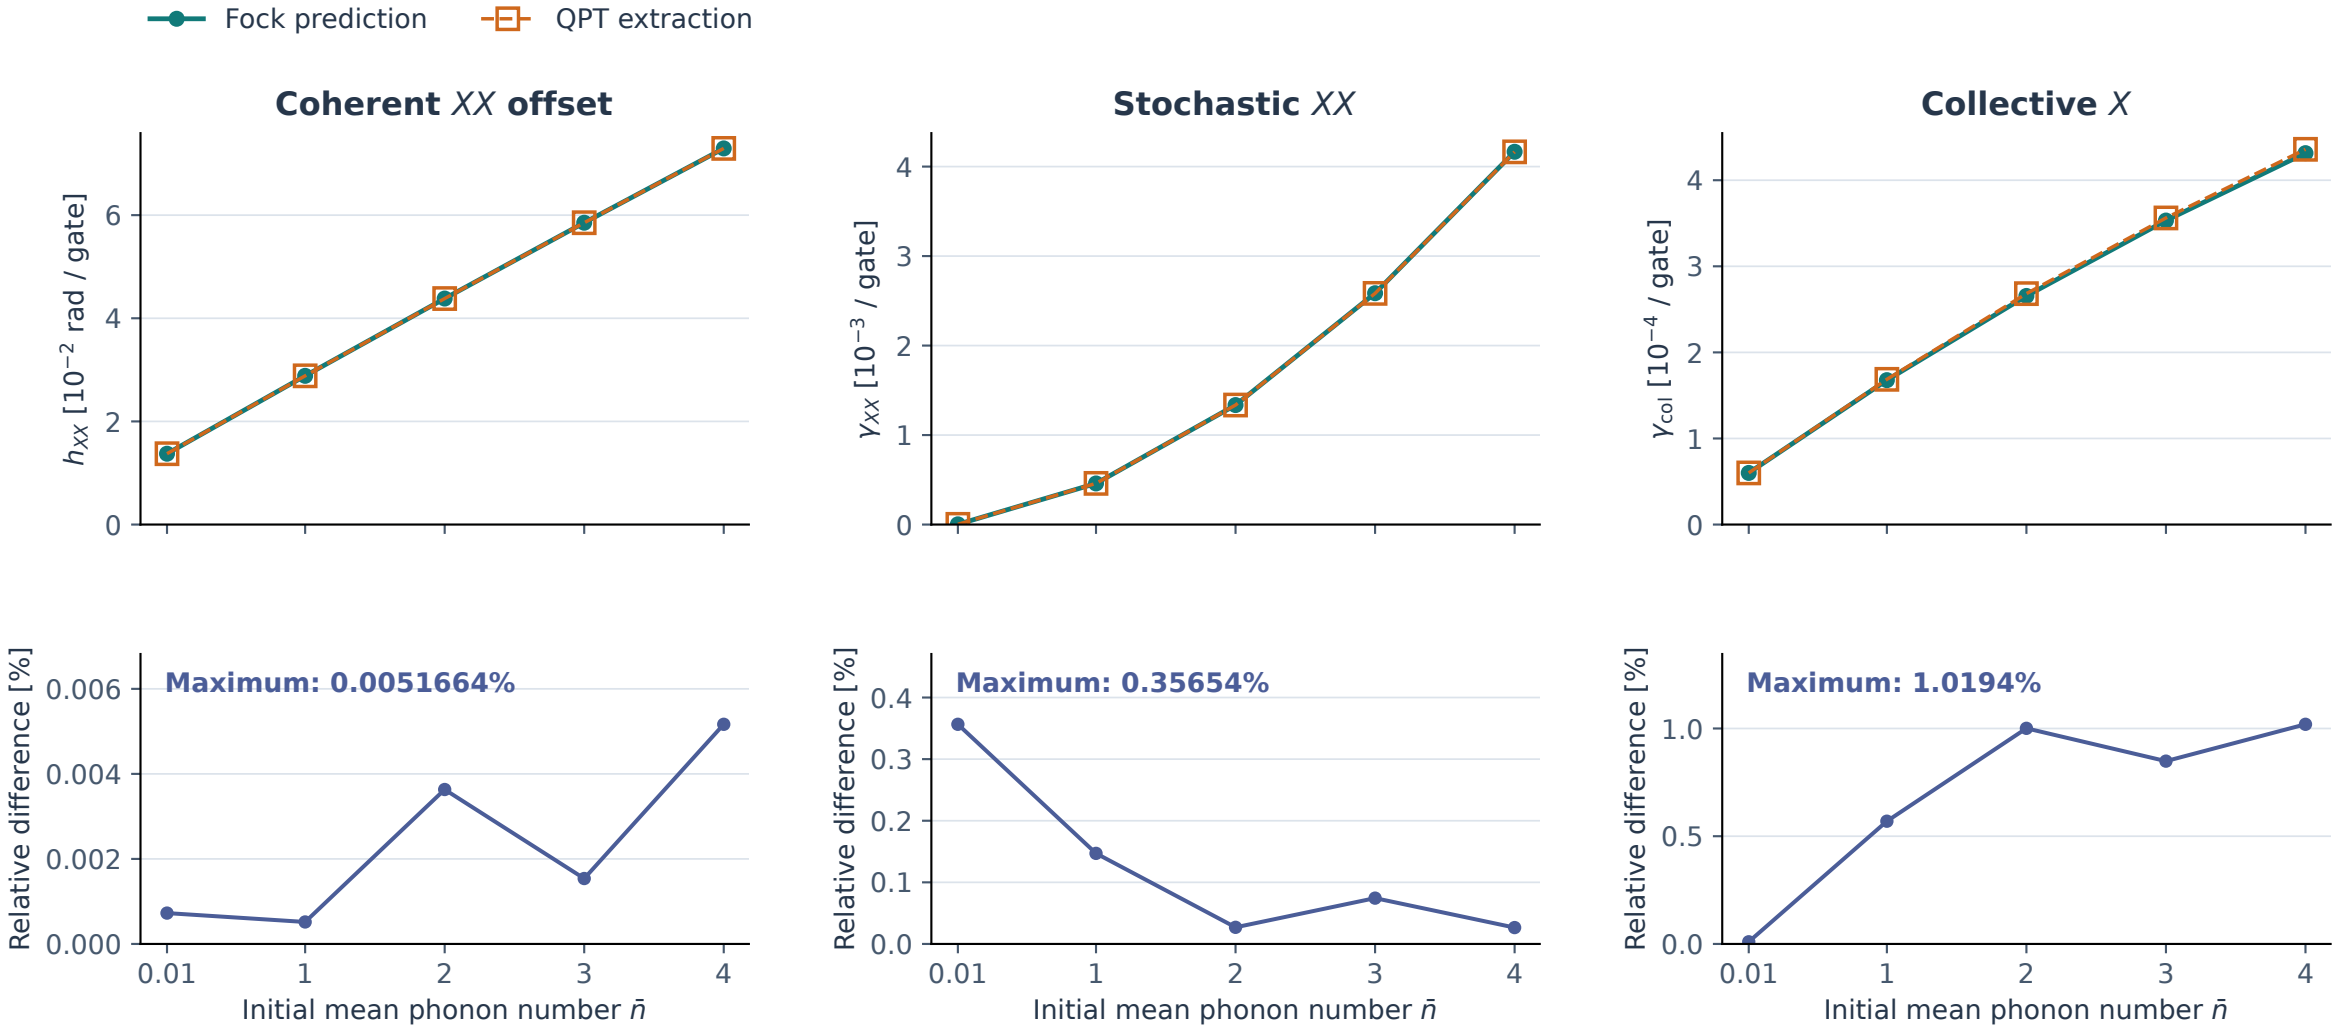
Fock-based prediction and QPT generator coefficients

Same Hamiltonian and gate settings; all explicit dissipative rates set to zero.



Relative difference = $100\,|x_{\mathrm{Fock}} - x_{\mathrm{QPT}}|/|x_{\mathrm{QPT}}|$. Lines connect the five saved points.

Collective-X reference: $(\gamma_{IX} + \gamma_{XI})/2 \simeq c_{IX,XI}$, for the jump operator $IX + XI$.
